

General Description of our Actions

- We have 3 main actions(files) function in our Rasa chatbot.
 1. Action
 2. Query action
 3. Quiz action

Every action should be defined in domain , and we use Rule to define our action also for handling pieces of conversations that should always follow the same path , and each action related to one intent in the Rule.

In Query action we fetch data from our database according to this action event eg. (show Chapter, task , deadline of tasketc).

In Quiz action we use form in Rasa because we need to collect a few pieces of information from a student (email-id...etc) in order to do a conversation to allow a student to make a quiz.

The following diagram describe the process of our action in Rasa.
